- **"Last call" for Valentine's Live! Featuring Mark Schultz | Feb. 12, 13**

Moody-1 XDS-PROQ Receiver PID Assignment Change | Feb. 17

Moody Radio is planning to make a change to the Moody-1 satellite channel on the XDS-PROQ satellite receivers' PID (Program Identification) assignment from "4FC" to "1200" on Wednesday, Feb. 17 at 10:58 a.m. CST.

The change, which may require about two minutes to be implemented, is being made in conjunction with our satellite service provider Microspace Communications in the XDS Network Management System. The purpose of this change is to allow additional services to affiliate stations in the future.

Moody Radio recommends that affiliates only air the first three minutes of the SRN News at 10:55-10:58 a.m. CST and cover up the final two minutes of that hour with local programming content, in order to avoid airing "dead air" from the network during the PID change.

Affiliates are also encouraged to place any "off-line" receivers back onto the SES-2 satellite feed prior to Feb. 17 in order to capture the XNMS commands to re-assign the new PID for Moody-1 on your XDS-PROQ satellite receiver(s).

Affiliates who may have additionally assigned Moody-1 to ports C or D should make plans to manually re-add Moody-1 to those ports after the change. The time of this change was selected in order to minimize interruption to satellite programming at affiliates, and a time when fulltime personnel could best monitor the change to ensure all goes well. If your station experiences Moody-1 satellite reception problems following the PID change, please call us at 1-800-621-7031.

There will also be a change involving the entire DVB carrier used by the Christian Radio Consortium in April involving a move from Transponder 17 to Transponder 7. Details on that change will be announced at a later date.
